

AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. **(currently amended)** A ceramic slurry composition for use in production of a thin green sheet by extruding the composition into an extruded sheet and stretching the extruded sheet, said composition comprising 20 wt% - 50 wt% ~~20-50wt.%~~ of a ceramic powder, 2-10wt.% ~~2 wt%~~ - 10 wt% of a polymer having [[an]] a weight-average molecular weight of 400,000 or more, ~~0.1-2wt.%~~ 0.1 wt% - 2 wt% of a polymer having hydrogen bond-forming functional groups, and ~~40-75wt.%~~ 40 wt% - 75 wt% of a solvent.

2. **(currently amended)** A ceramic slurry composition for use in production of a thin green sheet by extruding the composition into an extruded sheet and stretching the extruded sheet, said composition comprising 20 wt% - 50 wt% ~~20-50wt.%~~ of a ceramic powder, 2-10wt.% ~~2 wt%~~ - 10 wt% of a polymer having [[an]] a weight-average molecular weight of 400,000 or more, ~~0.1-2wt.%~~ 0.1 wt% - 2 wt% of a polymer having hydrogen bond-forming functional groups, and ~~40-75wt.%~~ 40 wt% - 75 wt% of a solvent, and ~~1-5wt.%~~ 1 wt% - 5 wt% of a polymer having [[an]] a weight-average molecular weight of 400,000 or less.

3. **(currently amended)** The ceramic slurry composition according to claim 1, wherein the polymer having a weight-average molecular weight of 400,000 or more is ~~polyolefins~~ a polyolefin.

4. (previously presented) The ceramic slurry composition according to claim 1,

wherein the hydrogen bond-forming functional groups are selected from the group consisting of -OH, -COOH, -COOCH₃, -NH₂ and -NHCO.

5. (Original) The ceramic slurry composition according to claim 4,

wherein the polymer having the hydrogen bond-forming functional groups is at least one polymer selected from the group consisting of polyvinylacetates, ethylene-acrylic acid copolymers, ethylene-ethylacryl copolymers, ethylene methylacryl copolymers, polyacrylic acids, polymethacrylic acids, polylactic acids, polyvinylbutyrals, polyvinyl alcohols, polyvinylamines, amine-derived polymers, polyurethanes, polyureas and polyamides.

6. (withdrawn) A method for producing a thin green sheet comprising:
extruding a ceramic slurry composition to prepare an extruded sheet;
and stretching the extruded sheet,

wherein the ceramic slurry composition comprises 20~50wt.% of a ceramic powder, 2~10wt.% of a polymer having an average molecular weight of 400,000 or more, 0.1~2wt.% of a polymer having hydrogen bond-forming functional groups, and 40~75wt.% of a solvent.

7. (withdrawn) A method for producing a thin green sheet comprising:
extruding a ceramic slurry composition to prepare an extruded sheet; and
stretching the extruded sheet,

wherein the ceramic slurry composition comprises 20~50wt.% of a ceramic powder, 2~10wt.% of a polymer having an average molecular weight of 400,000 or more, 0.1~2wt.% of a polymer having hydrogen bond-forming functional groups, 40~75wt.% of a solvent, and 1~5wt.% of a polymer having an average molecular weight of 400,000 or less.

8. (withdrawn) An electronic device comprising:
dielectric ceramic layers;

internal electrodes interposed between the respective dielectric ceramic layers; and external electrodes electrically connected to the 10 respective internal electrodes, wherein the dielectric ceramic layers are 40-layer or more stacks formed by laminating green sheets, with a thickness of 10 μ m or less which are produced in accordance with the method of claim 6, and the internal electrodes contain conductive components.

9. **(new)** The ceramic slurry composition according to claim 2, wherein at least one of the polymer having a weight-average molecular weight of 400,000 or more and the polymer having a weight-average molecular weight of 400,000 or less is a polyolefin.

10. **(new)** The ceramic slurry composition according to claim 1, wherein the solvent comprises at least one of paraffins, decahydronaphthalene, tetrahydronaphthalene, naphtha, mineral spirit, toluene, xylene, hexane, and chloroform.

11. **(new)** The ceramic slurry composition according to claim 1, wherein the solvent comprises at least one of paraffins, decahydronaphthalene, tetrahydronaphthalene, and chloroform.

12. **(new)** The ceramic slurry composition according to claim 2, wherein the solvent comprises at least one of paraffins, decahydronaphthalene, tetrahydronaphthalene, naphtha, mineral spirit, toluene, xylene, hexane, and chloroform.

13. **(new)** The ceramic slurry composition according to claim 2, wherein the solvent comprises at least one of paraffins, decahydronaphthalene, tetrahydronaphthalene, and chloroform.
